

## Academy Sports Floor

The Academy system is a cost effective solution which we would recommend for installations where under floor heating is to be installed or where the sub-floor is uneven.

## London Sports Floor

The London sports floor system accommodates a choice of synthetic surfaces, using elastic beams that can be levelled thus removing the need for a levelling floor screed, simplifying installation and reducing overall cost.

## Helsinki Sports Floor

Using the same elastic layer system as Athen, our Helsinki sports floor gives the same ideal consistency of ball bounce, and is finished with a hardwood wear layer.

## Athen Sports Floor

The Athen sports floor is our flagship area elastic sprung sports floor, with consistent ball bounce across the floor and accommodates a wide range of synthetic playing surfaces.

## PU Sports Floor

A polyurethane sports floor has a seamless construction. That means there are no joins to fail in later years. Polyurethane can be repaired seamlessly.

# Sports Flooring Services Care & Maintenance

Dynamik Sports Floors

## FLOOR CARE AND MAINTENANCE

Unfortunately no sports floor is maintenance free. They require frequent care to not only preserve the aesthetics but also the performance characteristics of the floor. Failure to do so can lead to a deterioration of the playing surface making it slippery and unsafe for athletes and may reduce the lifespan of the floor.

### Cleaning Products

As well as providing detailed care and maintenance instructions we also offer advice on the appropriate products and services to help preserve or restore your sports floor back to its original condition. From detergents to remove sweat and body fats as part of your weekly cleaning regime to products that remove black heel and scuff marks and restore the slip resistance.

### Chemical Clean

Despite regular cleaning, over time dirt, grease or other substances can build up on your sports floor making them slippery and unhygienic.

We can provide a deep chemical clean that removes all dirt, grease or any other substances from your sports floor, restoring your floor to its original surface.

## FLOOR CARE AND MAINTENANCE

### Scrub & Reseal

Every 2-3 years wooden floors require a scrub and reseal which involves lightly abrading the surface so that a new layer of lacquer can be applied. This not only cleans your floor but also restores an even level of grip to the surface.

### Sand & Reseal

Wooden floors also need to be sanded and resealed every 7-12 years depending on usage so that the old lacquer can be removed and a new lacquer applied, protecting the wood from dirt, grease or other substances. Since this process removes the previous line markings, you will also benefit from a new set of court markings.

### Surface Repairs

From stiletto heels to heavy equipment, no matter how many precautions you take to protect your sports floor, there is still a possibility the surface could get damaged.

If your surface needs repairing then we can offer a practical solution.

### Line Marking

Line marking is a vital component of your sports floor. With use lines will wear out and require re-marking to ensure they remain within recommended guidelines. If your sports floor needs re-marking, we offer solutions ranging from localised cleaning and painting to the specific area that we will be applying the new lines, to a complete sand and re-seal to restore your entire floor to its new condition with a complete set of new lines.

### Floor protection

In order to maintain your sports floors playing characteristics and prolong its life, a surface protection should be considered. We offer two solutions including durable vinyl protection and resilient carpet tiles to protect your sports floor through periods of non-sporting activities.
